Logo directions · 20 routes

CURRENT PACK WITH THE ECHO WORDMARK. LAYOUT AND DISH COLORS APPROVED.

The pack stays. The type changes.

FIXED

Front layout and the four dish colors. Full-height vertical signature in the left band, reading bottom to top. Signature color follows each dish's ink.

OPEN

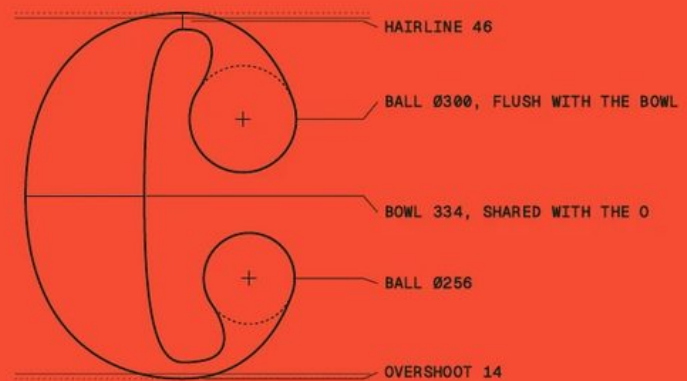

The wordmark. The client does not like the current type. Earlier notes: it read as mineral water rather than food, and the vertical C-O-O could read as an 8.

EACH ROUTE IS TESTED ON

- 01 Reads as food and cooking, not water, tech or wellness
- 02 Holds the full-height vertical signature at the current band width or narrower
- 03 C-O-O stays three letters when vertical
- 04 Carries at shelf distance through a freezer door
- 05 Avoids the candy-bar register the client rejected
- 06 Premium with personality, in the company of Graza and David

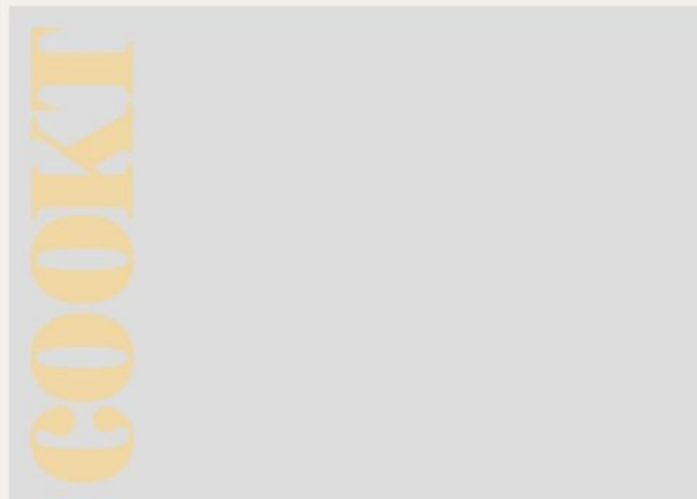

COOKT

MARK · THE C, HEAVY CUT FOR 16 PX

A fat face in the line of Robert Thorne and Vincent Figgins, the type of 1810s posters and handbills. Stems run seven times the hairlines, so the word holds at shelf distance in one color. The C's ball terminals carry the personality and become the mark.

CONTRAST	334 : 46
STEM / CAP	322 / 1000
TERMINALS	BALL Ø300 AND Ø256
WIDTH	4.46 × CAP, VERTICAL 4.52
GAPS	C-O 50 · O-O 70 · K-T 44

SERIF

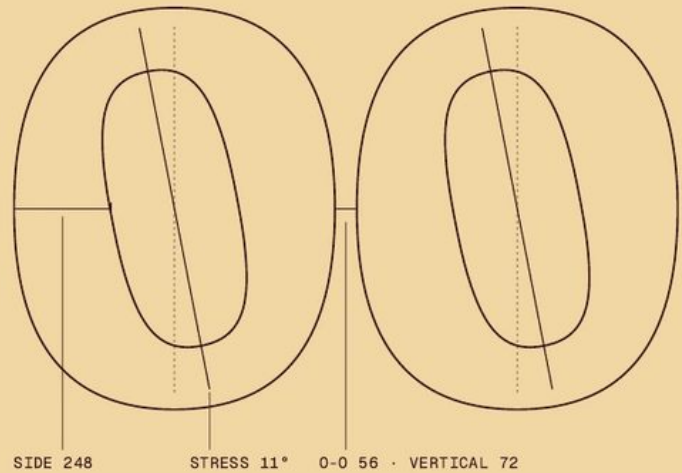

ON PACK

SHELF SCALE

On pack. The vertical cut is 4.52 caps long, so the band runs slightly narrower than the current one at the full 2739 height. The dish ink carries it alone; the hairlines are set heavy enough to hold on the darkest fields.

C-O-O. Each O has its own narrow slot counter and a 70-unit gap (92 in the vertical cut), so the two O's read as two dark ovals with two counters. Fat-face O's are taller than wide (0.86), which keeps them from stacking into circles.

A soft fat serif with low contrast, bracketed wedge serifs and counters that lean 11 degrees, as a broad pen leaves them. The K's leg kicks forward into a rounded toe. Outside corners are rounded and inside joins stay sharp, which keeps the weight warm without going bubbly.

CONTRAST	248 : 156
STEM / CAP	238 / 1000
STRESS	11° OBLIQUE
WIDTH	4.03 × CAP, VERTICAL 4.08
CORNERS	OUTSIDE 22-30 ROUND, INSIDE SHARP

MARK · THE C, ITS COUNTER LEANING WITH THE O'S

COOKT

SHELF SCALE

On pack. The vertical cut is 4.08 caps long, close to the current 4.17, so it fills the band at nearly the current width. The cupped T and the K's toe give the top of the signature a clear finish on every dish color.

C-O-O. Both O counters lean 11 degrees the same way, so stacked they read as two tilted letters rather than a symmetrical 8; the 72-unit gap in the vertical cut keeps the two bowls apart.

Reverse-contrast capitals. The weight sits on the cap line and the baseline; the verticals stay thin. The model is the 19th-century Italian and French Clarendon wood types, redrawn without spurs and with wide, open rounds. On pack, the heavy horizontals become two rails that run the length of the band.

Cap 1000 · slab 208 top / 220 base · stem 76

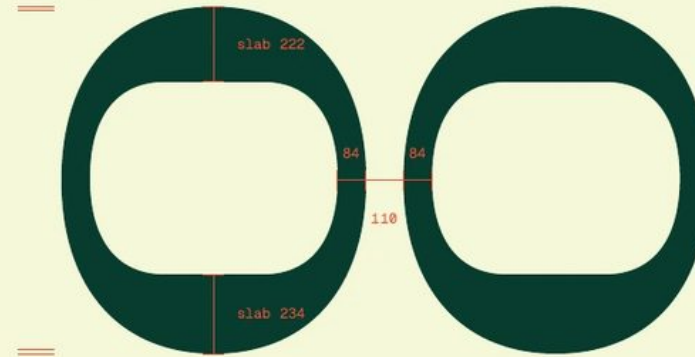

Contrast 2.8 : 1, horizontal over vertical

Rounds 0 900 wide · slab +14 at the axis · overshoot 12

Fit area-balanced · 0-0 56 · K-T +40

Vertical 0-0 110 · 4.29 : 1 · band 654 of 700

overshoot 12

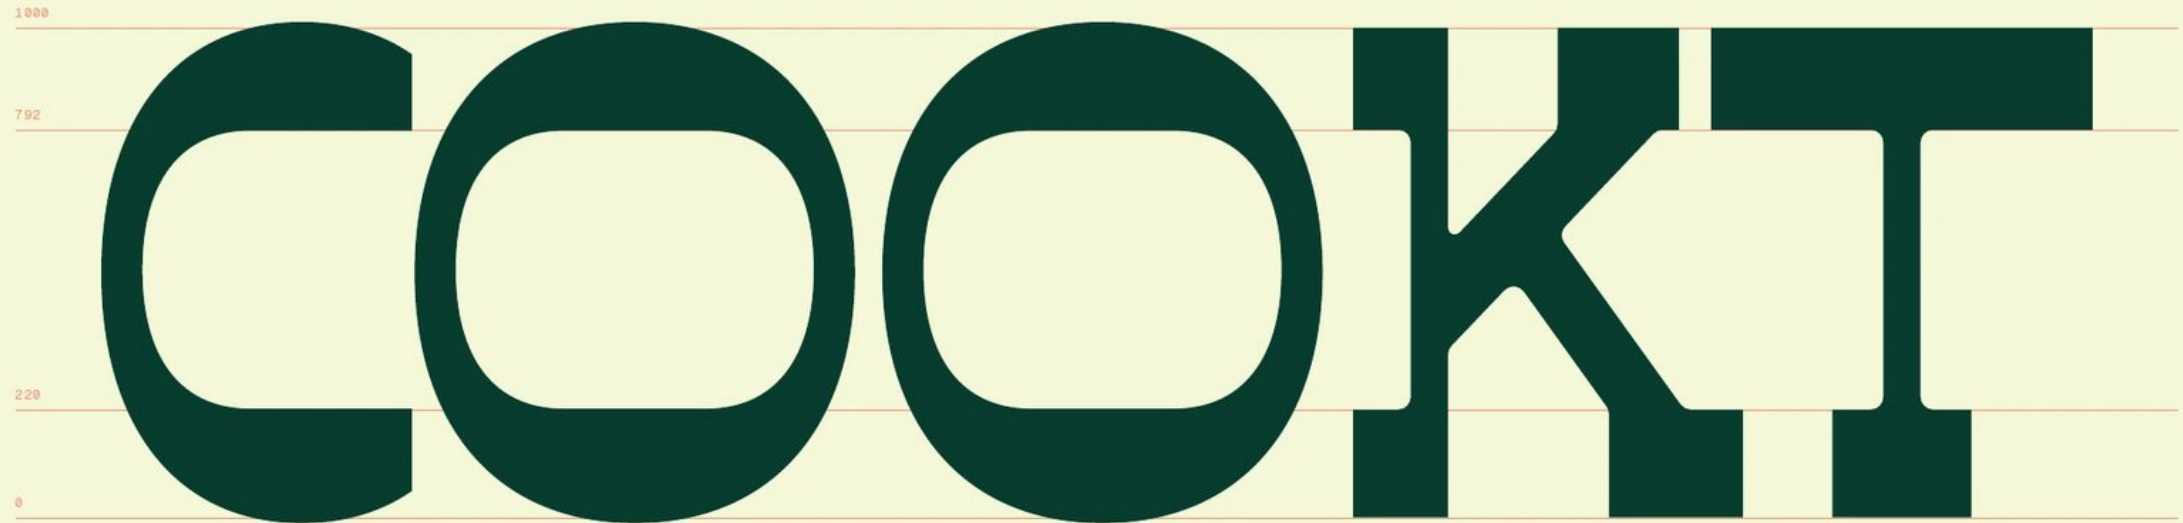

baseline

0-0 at the vertical fit. Side walls stay thin; the channel between them is wider than either wall.

Mark · the C at icon size, side wall raised to 156

SLAB SERIF

WORDMARK

SHELF SCALE

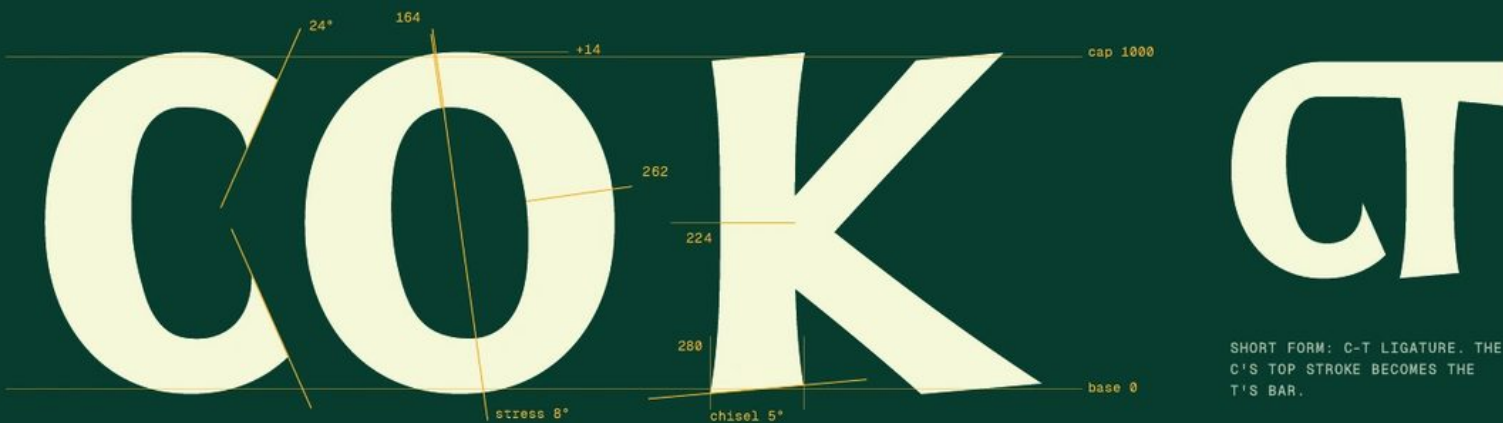

On pack. The cap-line and baseline slabs run as two rails along the band. The vertical fills the full 2739 height at 654 wide, against the current 657.

C-O-O. The vertical signature is refit with a 110-unit channel between the O's (56 in the wordmark), wider than either 84-unit side wall. The two heavy rails visibly break between the O's, and each O keeps its own flat-topped counter.

SLAB SERIF

ON PACK

COOKT

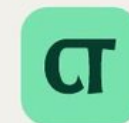

SHORT FORM: C-T LIGATURE. THE C'S TOP STROKE BECOMES THE T'S BAR.

Glyphic capitals drawn as lettering. Stems pinch at the waist and flare at both ends, every straight end is cut on one 5° chisel angle, and the rounds share one thickness law with a backhand stress. The weight is set heavy so the flare carries at shelf distance.

Stem	224 waist / 280 end
Rounds	262 side / 164 top
Chisel	5° on every straight end
C terminals	cut 24° into the counter
Width	4.64 × cap, one cut for both uses

GLYPHIC

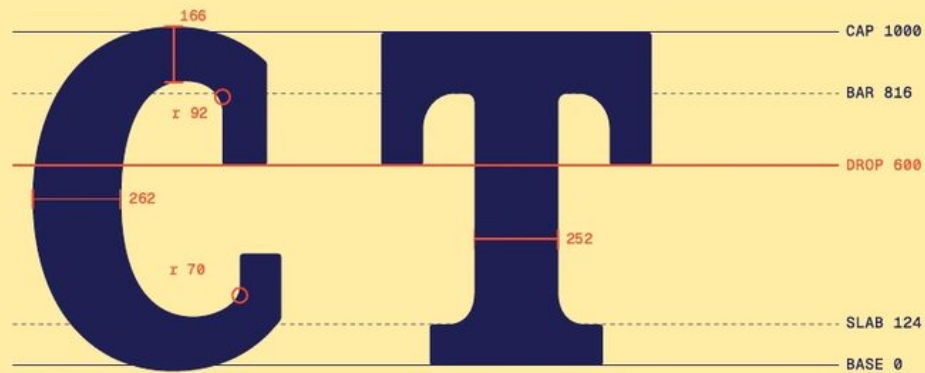

WORDMARK

SHELF SCALE

On pack. At 4.64 times cap height the horizontal wordmark fills the 2739 band as drawn, at a 591 cap; the band is about 10% narrower than today's and the word needs no separate vertical cut.

C-O-O. O-O is the widest round pair (122 units, against 50 for C-O), and each O's counter carries the same 8 degree backhand tilt, so in the vertical stack both counters lean the same way instead of mirroring into an 8.

C AND T ON THE SHARED DROP LINE · BRACKETS DRAWN AS TRUE ARCS

MARK · BEAKED C

A Clarendon-model slab drawn heavy enough to read through a freezer door. The C beak and the T serifs drop to one shared line at 600. The K arm ends in a ball, the only round terminal in the word.

Cap 1000 · stem 252 · round 262 · thin 166

Slab 124 · T bar 184 · bracket r 92 and 70

Overshoot 17 · drop line 600 on C and T

Width 4.24 : 1 · vertical cut 4.29 : 1

COOKT

SLAB

WORDMARK

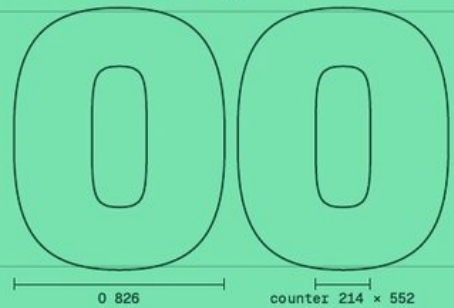

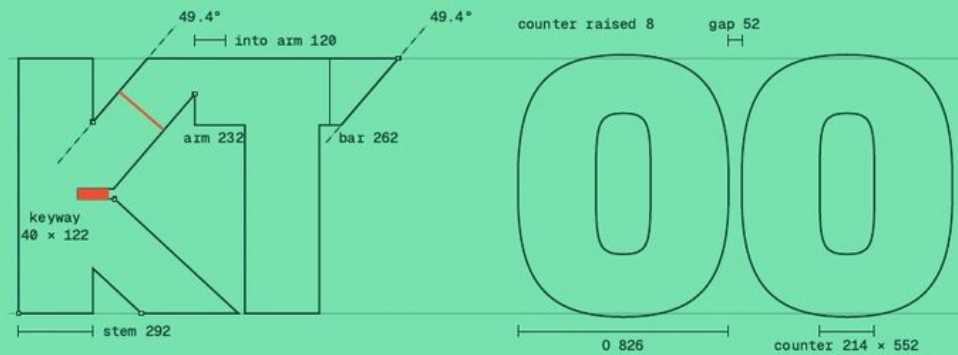

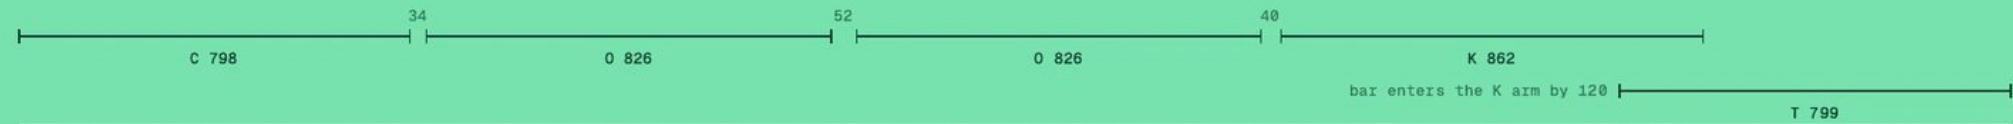

SHELF SCALE

On pack. The vertical cut is 4.14 times its ink height, so it fills the band from end to end at 661 wide with a 639 cap, just under the current 657. The slabs and the K ball hold their detail at shelf distance in every dish ink.

C-O-O. The O's are tall vertical-stress ovals with narrow counters, so neither reads as a circle. The vertical cut opens the O-O gap to 92 units, and the beaked C and the slab-footed K bracket the pair with very different silhouettes.

COOKT

An ultra-heavy grotesk, fitted tight, with counters cut down to slots. Horizontal cuts open the C and the K junction. The K arm runs into the T bar, and the bar end is cut on the arm's 49.4° line. The weight holds the vertical signature through a freezer door.

Cap 1000 · stem 292 · round 306 · bar 262

O counter 214 × 552, raised 8

C aperture 196, both terminals cut level

K keyway 40 × 122, T bar into K arm 120

Width 4.07 × cap · band 692 of 700

SHELF SCALE

On pack. At 4.07 times cap height the signature fills the band at 692 of the 700 allowed. The weight and the dense fit carry the word at shelf distance in every dish ink.

C-O-O. Each O is a squarish oval with a tall slot counter, not a circle, and the O-O gap is opened to 52 against 34 elsewhere, so in the vertical the two O's read as two dark blocks with distinct slots rather than an 8.

cookt

MARK · KT LIGATURE

Heavy lowercase with round bodies and counters tilted 18°, as if written with a broad pen. Every terminal is a straight cut. The t's bar grows out of the k's arm, so the spelling that makes the name becomes its signature detail.

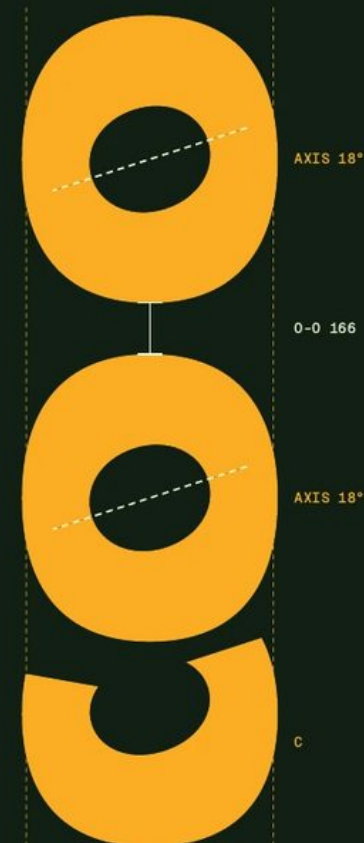

x-height 800 · ascender 1000 · stem 240

Round sides 296 · tops 216 · counters at 18°

k arm 250 at 48° · leg 270 at 62° · t bar 178

c-o 42 · o-o 64 · o-k 80 · k and t joined

Width 3.77 : 1 · vertical cut 4.02 : 1

VERTICAL CUT, C-O-O AS ON PACK · COUNTER
AXES AND O-O GAP

WORDMARK

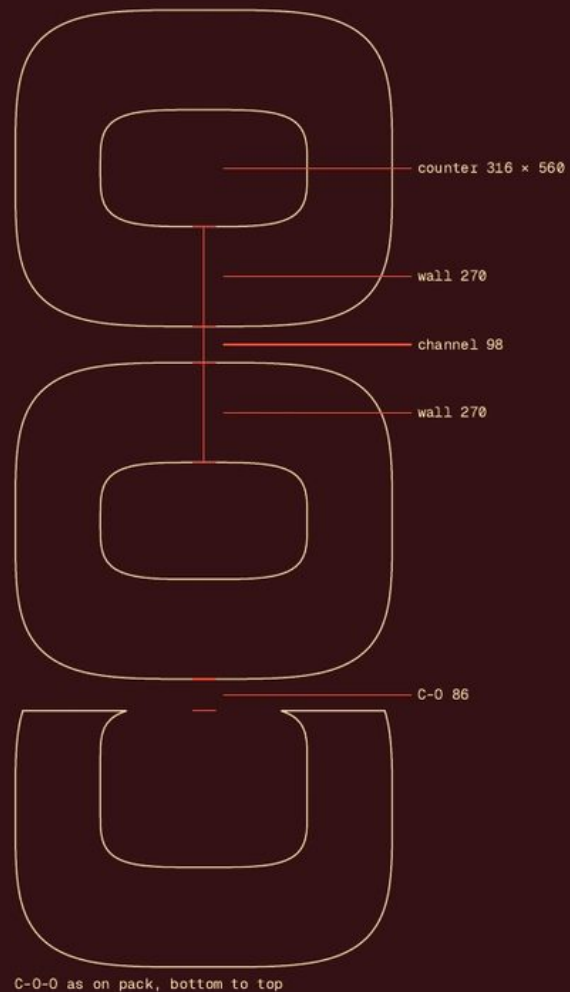

SANS

SHELF SCALE

On pack. The vertical cut is 4.02 times its ink height, so it fills the band from end to end at 681 wide, inside the current band. The x-height takes 537 of that width and the k and t rise toward the pack edge.

C-O-O. Each o is a wide body with flat facing sides and a tilted counter, so it reads as a letter with direction rather than a ring. The vertical cut opens the o-o gap to 166 units, a fifth of the x-height.

COOKT

Black geometric capitals with squared rounds. One superellipse ($n = 4$) draws every curve, from the bowl of the O to the corners of the T bar; stems and the K's crotches stay knife-cut. The O's flat sides keep C-O-O as three separate blocks in the vertical.

Cap 1000 · wall 270 · top/bottom 230 · stem 268

Curve $|x/a|^4 + |y/b|^4 = 1$ · rounds and corners

O 856 x 1020 · overshoot 10 · counter 316 x 560

Fit C-O 62 · O-O 74 · O-K 72 · K-T 52

Vertical +24 per pair · 4.34 : 1 · band 644 of 700

Mark · the C holds a smaller O in its mouth. Tile cut on the same $n = 4$ curve.

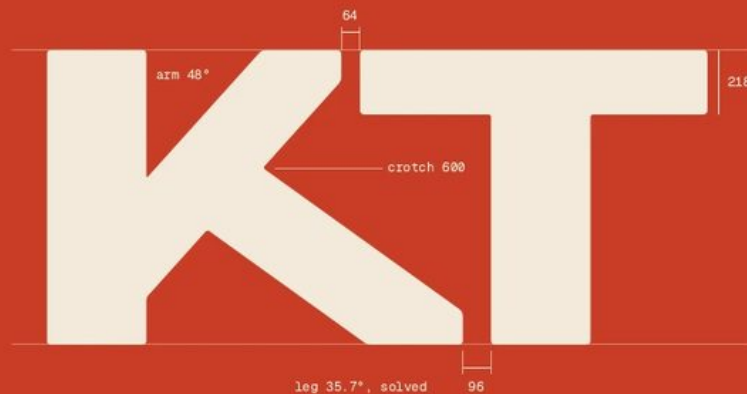

SHELF SCALE

On pack. Fills the full 2739 band height at 644 wide, against the current 657. The heavy side walls turn into the column's cross bars, so the word reads as a dense stack at shelf distance.

C-O-O. The O's sides are flat for most of their length, so two stacked O's meet along a straight, parallel channel with no pinched waist. The vertical opens that channel to 98, about a third of the 270 wall, and the C's knife-cut opening faces the first O.

K-T NEST, HORIZONTAL CUT

TWO WIDTHS OF ONE O

An extended black grotesk drawn for COOKT. Every cut is level or plumb, the rounds carry straight flanks, and the K's leg is solved to land under the T's bar. The vertical is a second cut of the same drawing, narrowed until the O is square.

Stem / round side
338 / 352, tops 192, bottoms 204

Horizontal
6.24 × cap

Vertical cut
5.15 × cap, O 1032 square,
verticals -6%

Cuts
level or plumb, corners eased

SHORT FORM

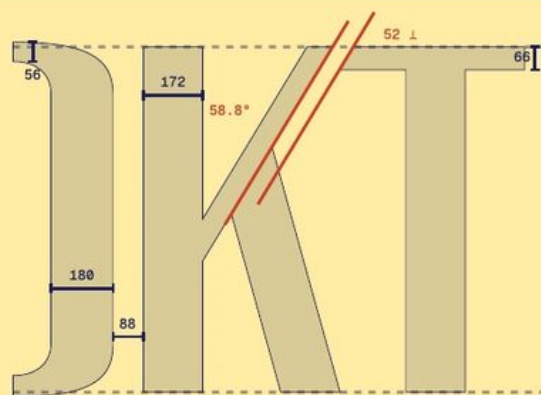

SHELF SCALE

On pack. The vertical is a second cut of the same drawing: the O is narrowed until its box is square, C, K and T follow, and verticals lose 6%, which brings the word to 5.15 times cap height. It fills the 2739 band at a 532 cap against today's 657, and the black weight carries the presence the lost height would have given.

C-O-O. The O's straight flanks face each other across a parallel 108-unit channel, so in the vertical stack the two O's read as flat-sided letters with slot counters, never as two touching circles; the C's level-cut aperture keeps the first letter distinct.

COOKT

K-T JUNCTION · UNITS OF 1000 CAP
SANS

C

MARK · SMALL-SIZE C

Condensed poster capitals drawn from scratch: heavy stems, hairline horizontals, flat-sided O's. The contrast gives COOKT the voice of a printed menu board. The K has a hairline arm and a full-weight leg, and the T's bar is sheared parallel to that arm so the pair locks together.

Stem / hairline	172 / 56 · 3.2 : 1
Width	2.98 × ink height
Vertical	letterspaced to 4.05
K arm / leg	58.8° / 74.5°
K-T channel	52 ⊥ to the arm

COOKT

VERTICAL · SPACED TO THE BAND
WORDMARK

SHELF SCALE

On pack. Condensed letters fall to 2.98 width per height, below the band's 3.9 minimum, so the vertical is letterspaced to 4.05, the way a compositor justified a condensed line to its measure. The cap lands at about 658 of the 657 current, and the band narrows to 676.

C-O-O. Each O is a tall flat-sided slot rather than a circle, and in the vertical the O-O space is 373 units, twice the wall weight, so the pair reads as two stacked lozenges with a clear channel between them.

cookt

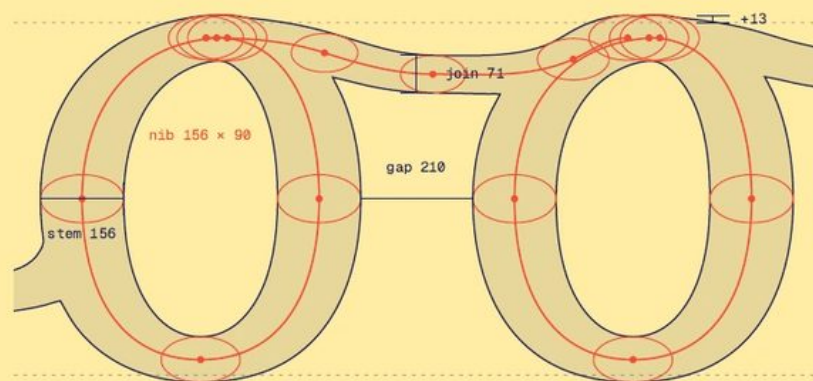

1000 k loop

831 t

660 x-height

0 baseline

O-O BRIDGE · CENTERLINE, NIB POSITIONS, MEASURED INK

RATIONALE

Lowercase upright script, drawn with a single oval nib along hand-set centerlines. Downstrokes are 156 units and joins about 70, so the word stays dark enough to read through a freezer door. The k loop and the long t-bar carry the gesture; the bowls stay plain.

x-height 660 · k loop 1000 · t 831

Oval nib 156 × 90 · contrast 1.8 : 1 · vertical stress

Rounds overshoot 12-14 · joins 70 on a shared rail

Wordmark 3.95 : 1 · vertical 4.33 : 1 · band 632 of 700

MARK · THE C WITH ITS LEAD-IN

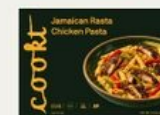

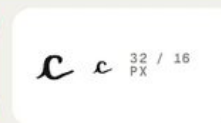

c c

32 / 16 PX

HAND

WORDMARK

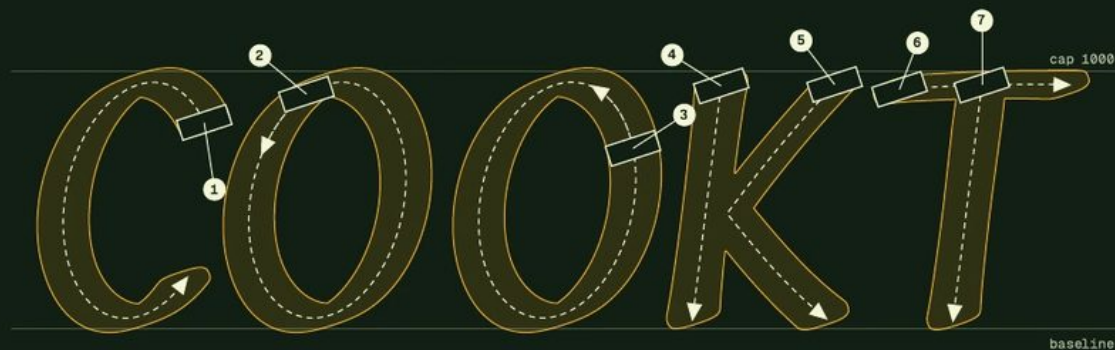

SHELF SCALE

On pack. The pack version is spaced wider, at 4.33:1, so the signature fills the full band length at 632 wide, 25 narrower than the current one. The k loop and the t-bar point to the pack edge and the lead-in anchors the bottom.

C-O-O. The two o's hang from one bridge with a 210-unit counter between them (280 in the vertical), and the c join thickens only the first, so the stack reads as two different bowls on a thread.

HAND

ON PACK

STROKE ORDER · BRUSH FOOTPRINT AT EACH LANDING · ARROW AT EACH LIFT

C c 32 · 16 PX

Show-card capitals painted with one flat brush held at 18°. Each letter takes one or two strokes in sign-painter order. Stems swell where the brush lands and lifts, and the K leg kicks out on release. It carries the register of a takeout-window sign into the freezer aisle.

COOKT

Cap 1000 · slant 7° · width 4.09 × cap

Brush 200 × 80, chisel at 18°

Stem 195 landing · 184 waist · bar 103

7 strokes: C 1 · O 1 · O 1 · K 2 · T 2

Gaps 78 · 96 · 92 · 66, 0-0 widest

BRUSH

WORDMARK

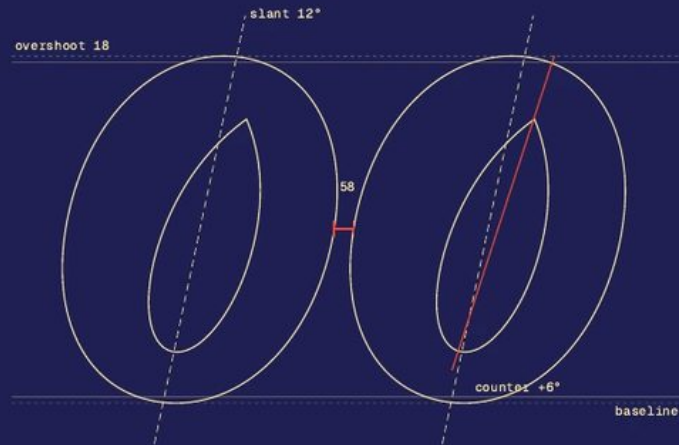

SHELF SCALE

On pack. At 4.09 times cap height the word fills the band from top to bottom at roughly the current band width. The slant and the swelling stems keep the signature reading as painted lettering at shelf distance.

C-O-O. The two O's sit 96 units apart, the widest gap in the word, and each is a slanted oval with diagonal brush stress rather than a circle, so stacked in the band they read as two leaning letters and never as an 8.

BRUSH

ON PACK

Fat italic lettering drawn on a pointed-brush logic, with weight on the downstrokes and thin upstrokes. The C ends in a ball and the T bar starts from a drop. The 12° slant gives the word forward motion. Teardrop counters keep both O's legible as letters in the vertical signature.

Slant	12° · rounds part-rotated, straights sheared
Stem / arm	272 / 150 at cap 1000
Counters	teardrop, axis +6° past the slant
Width	4.11 × cap · vertical 4.07

MARK · C WITH BALL TERMINAL

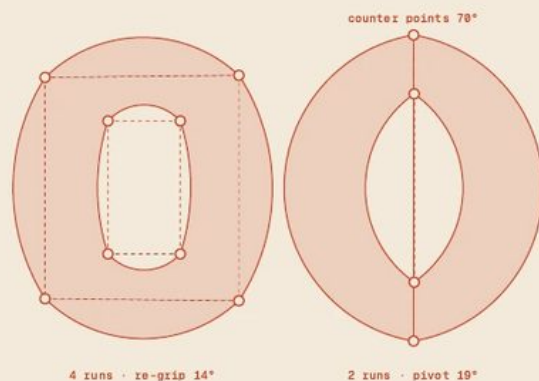

COOKT

SHELF SCALE

On pack. The vertical runs at 4.07 times cap height, so the cap fills about 673 of the 700 band. The slant leans the letters toward the top of the pack; the shortened T arm cuts the top overhang from 477 to 385 units so the word ends cleanly at the band's top.

C-O-O. Each O is a slanted oval with a teardrop counter pointing up and to the right, so the stack reads as two leaning letters with direction, never two circles. A 74-unit gap in the vertical keeps them separate at shelf distance.

Lettering cut from paper. Every edge is one scissor run, and every corner is where the cut changes direction. The first O is cut in four runs and the second in two, so the two O's stay distinct in the vertical. The register is Matisse's late cut-outs.

Edges	one circular arc per run
Stems	282 → 264, tapered strips
O · O	4 runs, cushion · 2 runs, leaf
Width	4.26 × cap · vertical 4.32

MARK · C, TWO SNIPPED TERMINALS

HAND

WORDMARK

SHELF SCALE

On pack. The vertical runs at 4.32 times cap height, so the cap is about 634 in the 700 band and the word fills the full length. The flat-bottomed K and T sit square on the band edge, and the leaf O gives the band a single focal point.

C-O-O. The two O's are cut differently: the first is a four-run cushion with flat sides, the second a two-run leaf with pointed ends and a pointed counter. Stacked vertically they read as two distinct letters, and the leaf's points keep them from closing into an 8.

HAND

ON PACK

COOKT

C

c 32 / 16 PX

Lettering drawn with the line of the brand illustrations: straight runs of one pen, sharp mitered corners. The rounds are faceted like a cut pepper ring. Each O has its own run sequence, so the stacked signature keeps three letters. The pen weight is set for shelf distance.

PEN 170 vertical · 146 horizontal · 160 diagonal
RUNS C 9 · O¹ 11 · O² 9
JOINS mitered corners, ends cut square to the run
WIDTH 4.12 × cap · vertical 4.18
MARK the C at pen 228 for 16 px

SHELF SCALE

On pack. The vertical lockup is $4.18 \times$ cap, so it fills the band at the current width. At 170 the line holds in the dish ink on all four fields.

C-O-O. The two O's are different drawings. Stacked in the band, the flat run on top of O' faces the corner at the base of O² across 74 units of air, so the pair never closes into an 8.

MONOLINE

ON PACK

O¹ · tied top and bottomO² · tied left and right

Stencil capitals cut like a crate or kitchen stencil. Every tie is cut square to the stroke it crosses, and every piece carries the same 15-unit die-cut corner. The first O is tied top and bottom, the second left and right, so the stacked signature keeps two O's.

STEM	252 vertical · 214 round horizontals · 218 T bar
TIES	74, cut square to the stroke
CORNERS	R 15 die-cut on every piece
O-O	O ¹ tied top and bottom · O ² left and right, +28
WIDTH	4.58 × cap · vertical 4.64

c 32 / 16 PX

SHELF SCALE

On pack. The vertical lockup is $4.64 \times$ cap, so the signature runs the full band height at a cap of about 590 on the 4200 front, narrower than the current band. The ties stay open at shelf scale in all four dish inks.

C-O-O. O¹ is tied top and bottom and O² left and right. Rotated into the band, the first O splits across the band and the second along it, so the pair cannot read as a stacked 8.

COOKT

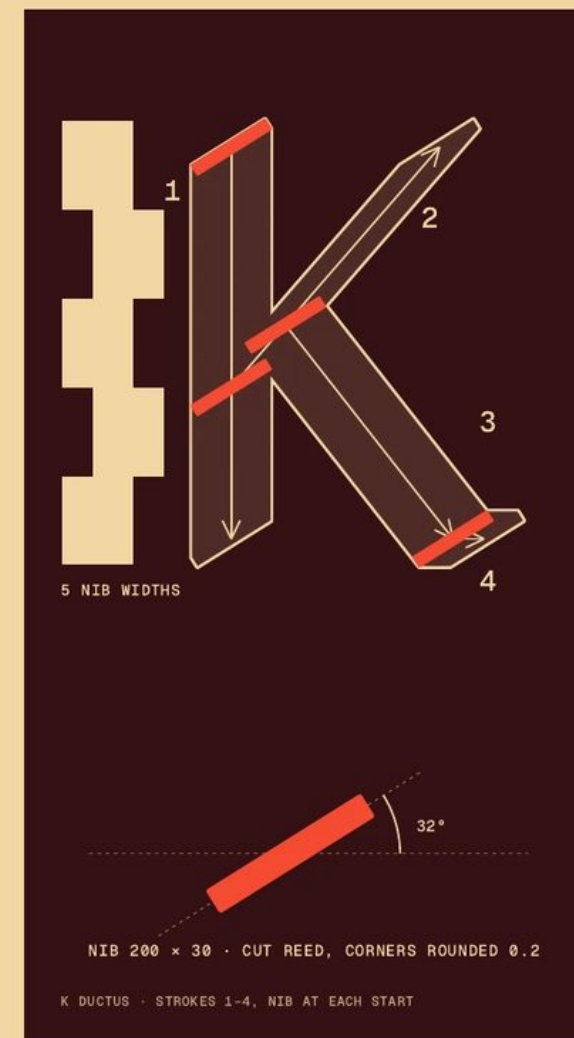

C

MARK · C, 4-NIB-WIDTH CUT

Latin capitals written with one broad nib held at 32 degrees, five nib widths to the cap. The pen alone sets the contrast and cuts every terminal; nothing is retouched. The O's lean on a diagonal stress, and the K ends in a baseline flick, as in written Roman capitals.

NIB	200 × 30 at 32°
CAP HEIGHT	5 nib widths
LEG / STEM / HAIR	201 / 183 / 30
WIDTH	4.11 × height; vertical as is
O-O	72, thick parts on opposite diagonals

HAND

WORDMARK

SHELF SCALE

On pack. At 4.11 the horizontal wordmark goes into the band as is, with no separate vertical: it fills the 2739 height at 666 wide, with a cap of about 645 against 657 now.

C-O-O. The O's are upright ovals narrower than a circle, and the nib puts each O's thick parts on a diagonal, so in the band the two facing sides are thick at opposite ends and never mirror into the waist of an 8. The 72-unit O-O gap is more than twice the hairline.

HAND

ON PACK

C · RATIONALE

Contrast capitals with vertical stress, drawn so the identity sits in two joins. The O's link like chain rings, one over and one under, which keeps them two letters when stacked on pack. The K's arm runs straight into the T's bar.

Cap 1000 · stem 206 · round 222 · thin 118

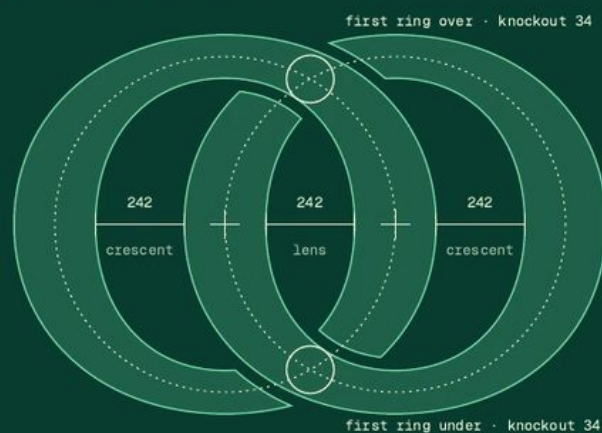

Contrast 1.9 : 1 · vertical stress · overshoot 16

O-O centers 464 apart · knockout 34

K-T fillet r 92 · arm 122 at 39.6°

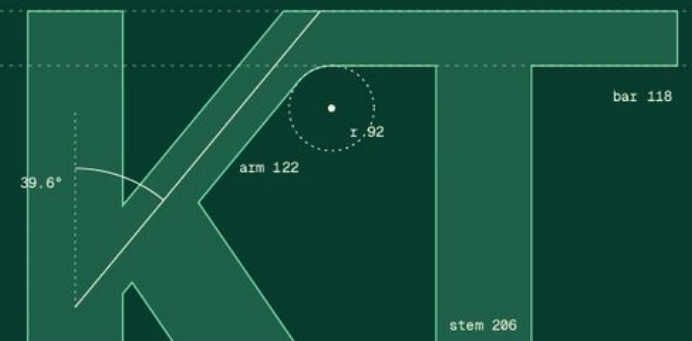

Vertical 4.22 : 1 · band 650 of 700

O-O · LINKED RINGS, ALSO THE MARK

APP · 32 · 16

K-T · ARM BECOMES THE BAR

SANS

WORDMARK

SHELF SCALE

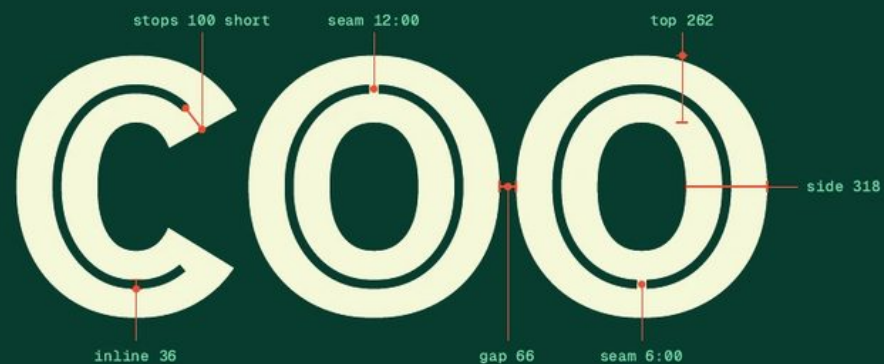

On pack. The pack version opens each gap and lengthens the T bar, running at 4.22:1, so the signature fills the band length at 650 wide, 7 narrower than the current one. The link sits at the middle of the band.

C-O-O. The O's link like two chain rings: one passes over the other at the top crossing and under it at the bottom. Stacked in the band they read as two rings with three counter shapes, which no 8 has.

INLINE DROPS OUT · REDUCED CUT BELOW 48 PX

32 COOKT

24 COOKT

18 COOKT

INLINE CUT AT 24:
RULE UNDER 1 PX

Many 1970s enamel signs cut a keyline through heavy letters in the field color. COOKT runs that single rule down the center of every stroke, so each dish color shows inside the word. Below 48 px cap the rule thins out, and a reduced cut without it takes over.

Inline 36 · 3.6% of cap

Stops 100 short of each terminal

Breaks one rule at every junction

Width 4.63 × cap · pack cap 592

Reduced cut below 48 px cap

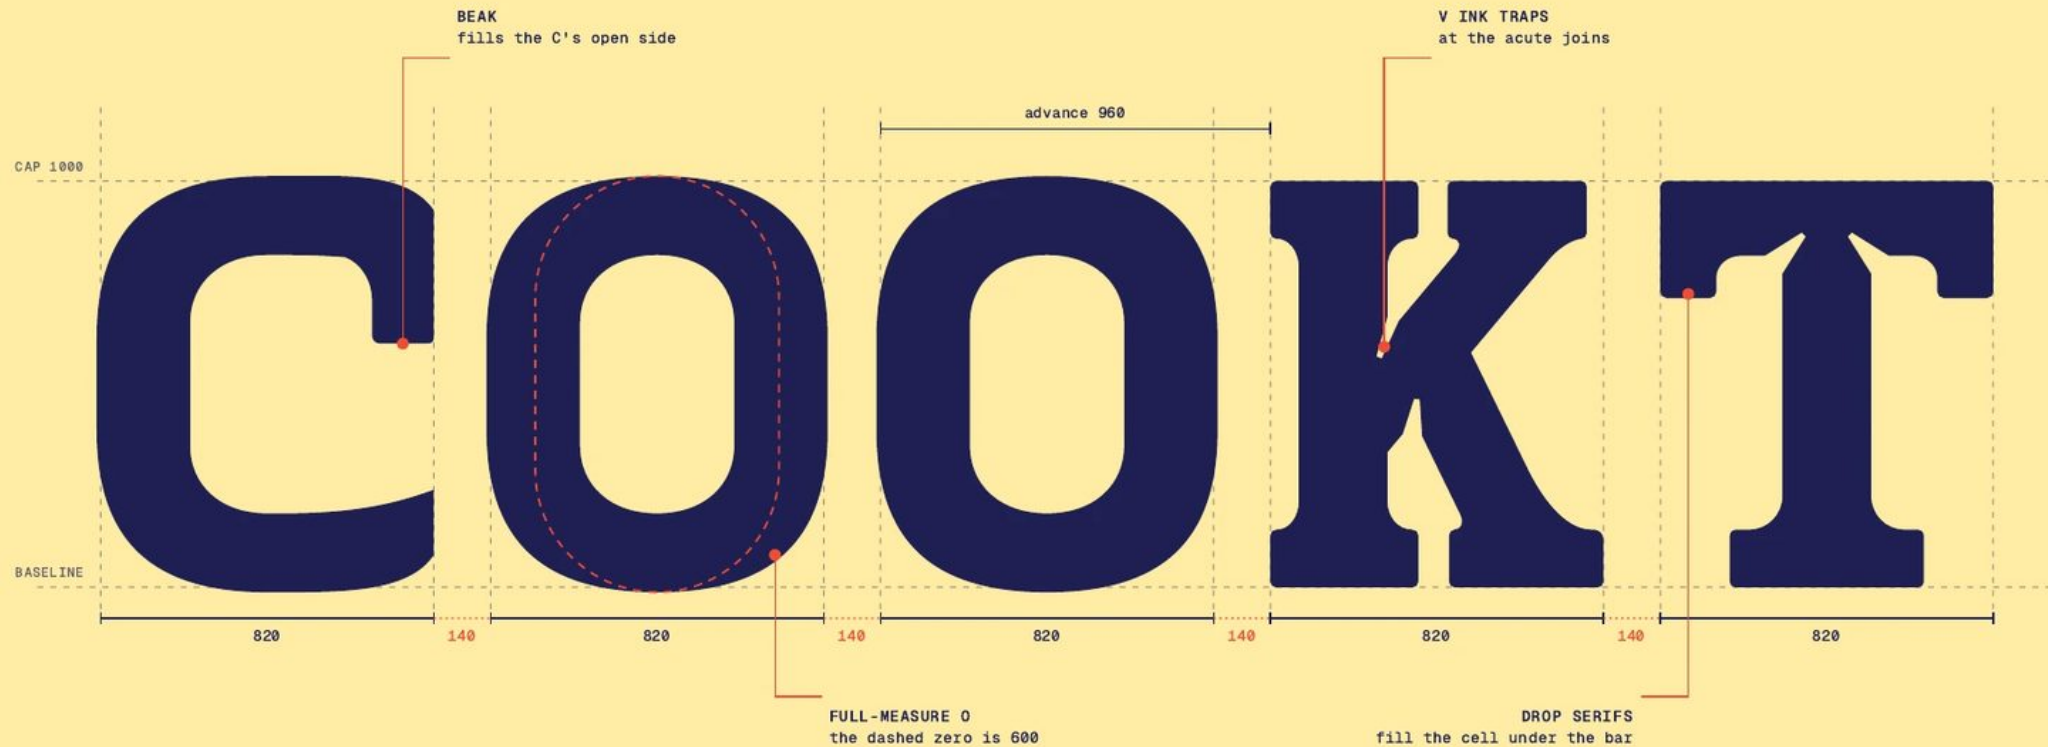

WORDMARK

SHELF SCALE

On pack. Ink width over cap height is 4.63, so the vertical fills the full 2739 height at a cap of about 592, roughly 10% narrower than the current band. The inline shows the dish field through each letter in all four colorways.

C-O-O. Each O keeps its own seam in the inline, at 12 o'clock on the first and 6 o'clock on the second. In the vertical stack the two breaks fall on opposite edges of the band, and the solid rims with a 66-unit gap keep the pair as two rings.

Kitchen order printers give every character the same advance. COOKT is drawn to that rule: five letters on one 820 measure with equal gaps, and an O too wide to pass for a zero. A beak, drop serifs and ink traps fill out each cell.

Advance	960
Measure	820
Gap	140
Stem / slab	218 / 142
Width	4.67 × cap

MARK
The C reversed out of a
ticket torn off the roll

SHELF SCALE

On pack. Ink width over cap height is 4.67, so the vertical fills the full 2739 height at a cap of about 587, roughly 11% narrower than the current band. The fixed advance runs up the band like a printed ticket line.

C-O-O. The O's are full-measure squared rounds with straight sides, set on the same fixed gap as every pair (120 units after overshoot). In the vertical stack they read as two flat-sided letters, and at full measure they are too wide to read as zeros.

Next: choose four to six routes to refine.

SELECT

Shortlist four to six routes, ideally across at least three families. Mark any detail worth carrying between routes, such as a K, a C terminal or an O-O treatment.

REFINE

Redraw each shortlisted wordmark at production quality: optical spacing at three sizes, final vertical and horizontal lockups, one-color, reversed and gloss-on-matte tests, and a reduced cut for small sizes.

PROVE

Place each refined route on all four printed fronts at full size and at shelf distance, alongside the dish name and footer marks, then present to the client with the pack unchanged.
